

We use a personal, human approach to make complex network environments more visible.  
We deliver a cost-effective, flexible, and strategic technical solution capable of serving Federal, State, Local & Commercial clients with a ready force of NETSCOUT, SOLARWINDS, and CISCO certified experts.

## NETWORK & SYSTEMS ENGINEERING:

- Systems Architecture, Design and Engineering
- Network Preparation (rack/stack)
- Network Configuration
- Network Design
- DoD Cleared Personnel with SIPR/NIPR experience
- Legacy Removal of hardware and software
- Information Technology
- Testing and Evaluation
- Vulnerability assessments

## NETSCOUT:

- NGeniusONE Service Assurance Platforms with ASI and CDM Technology Network and Application Monitoring with Packet-level Drill-down Capability up to 1 ms Resolution
- Design of architecture for a scalable environment
- InfiniStream for Out-of-band packet capture
- Seamless traffic aggregation with Packet Flow Switches.
- Team-based dashboards for leadership view
- vSCOUT and vSTREAM software-based cloud environment monitoring
- nGenius Pulse
- Real-time, Exportable Custom Packet Captures with Filtering
- Customizable Grid Views for On Demand Dashboards
- Automatically Service Dependency Application Mapping

## CYBERSECURITY AND VULNERABILITY:

- Prepare security audit test plans
- Conduct threat assessments
- Analyze intrusion detection systems and public key infrastructure

## SOLARWINDS:

- SolarWinds Orion Platform Expertise
- SolarWinds Professional Training
- SolarWinds Network Configuration Manager
- Fulfilling your cybersecurity mission through DISA STIG Compliance for audit and remediation
- Customization for Alerting/Mapping/ Reporting
- Mission Driven Dashboards for every level of Command Custom Query Development
- Custom Node Management
- Scalability, Load Balancing, and High Availability
- Advanced Integration, SolarWinds API and 3rd Party Integrations
- SolarWinds Network Performance Monitor (NPM)
- Interface Monitoring, Custom SNMP Polling
- Vulnerability detection and management
- Real-time Change Detection
- End of Life / End of Support Reporting
- Centralized router configuration changes
- Log and Event Manager (SIEM)
- IP SLA Monitoring
- Network Device Tracking
- IP Address, DNS and DHCP Management
- Custom Application Monitoring

## We exist to help you achieve your organizational goals!

**Innovation:** We are not just about the tools, but how they are deployed, customized, and configured to meet your needs. We are beyond simple implementation. We walk you through utilization, build customization based off your unique and individualized needs, and provide side-by-side knowledge transfer on what is important to you in the accomplishment of your mission.

**Performance:** Axiom's excellent track record from current and past clients confirms our constant level of professionalism and effective processes on which we operate.

**Flexibility:** Axiom has streamlined our method for delivery of services to offer on-site, remote, or a combination of both methods. We provide short-term or long-term engagement capability and can operate in any time zone. This level of flexibility provides our customers with reduced cost and maximizes allocated time.

### Past Performance and Clients:

#### US Air Force, Central Command (AFCENT) - Shaw AFB:

Provided a DoD cleared, full-time on-site engineer to work daily with client staff. Services included configuration, remote site deployment, support, maintenance, and network troubleshooting. Developed custom dashboards, reports, and service monitors to meet client requirements.

#### US Army – Military Entrance Processing Command (MEPCOM):

Designed standard and customized service monitors to achieve the level of network oversight required by the client. Conducted onsite training to ensure knowledge transfer of new software capabilities.

#### DC Office of the Chief Technology Officer (DC OCTO):

Configured custom services and specialized application monitoring for multiple agencies. Led team training on best practices for data collection, analyzing, and reporting. Significantly improved reporting processes for outage response.

#### US Army/Air Force – Joint Air Defense Operations Center (JADOC):

Complete replacement of legacy infrastructure monitoring in three separate environments. Developed NOC views and advanced alerting for 24/7 monitoring operations.

#### Additional Customers:

- The Aerospace Corporation
- ANSYS
- Unites States Air Force
- Disney Animal Kingdom
- Bank of Ireland
- ADP
- EPOCH Concepts
- Loop1 Systems
- Boston College
- GCI
- Commonwealth of Virginia
- The Vanguard Group
- Dept. of Homeland Security
- SPAWAR
- Price Waterhouse Coopers
- United States Marine Corps
- US Cellular
- Moseley Technical Solutions
- Ralph Lauren
- Union Bank
- Citizens Insurance
- eHealth (Ontario)
- Harris Health
- SABIC
